Types of exam data available

In 2023, due to the impact of the Marking and Assessment Boycott (MAB), the following types of exam result will be provided:

<table>
<thead>
<tr>
<th>Type of result</th>
<th>Type of circumstances</th>
<th>CamSIS record will show</th>
<th>Transcript will show</th>
</tr>
</thead>
<tbody>
<tr>
<td>Classed results with mark breakdown</td>
<td>This is the usual exam result data as provided in previous years. Students will receive a Class, marks by paper, a total mark and rank.</td>
<td>The record will look as expected with a Class and mark breakdown with rank.</td>
<td>Data in the usual way.</td>
</tr>
<tr>
<td>Provisional marks</td>
<td>Provisional marks will be provided where an Exam Board are unable to Class students under the Classing regulations, or where a full set of marks is not available (e.g. where some of the student’s papers are borrowed from another subject and those marks have not been shared).</td>
<td>There will not be Class or rank information. The ‘Class’ on CamSIS will show as code ‘PRV’ with a descriptor of ‘provisional results’. Some marks by paper should be available, although not necessarily all of them.</td>
<td>The transcript will show ‘Provisional Results’ against the Class and marks where they exist.</td>
</tr>
<tr>
<td>No marks</td>
<td>Where an exam board has not been able to meet, or marks have not been provided.</td>
<td>Blank rows. No data will appear. Nothing will appear on the student’s transcript.</td>
<td>Nothing will appear on the transcript.</td>
</tr>
</tbody>
</table>

Exam Boards may provide any combination of these marks.

Daily lists

Lists will continue to be provided to Colleges as Word documents where an Exam Board has Classed the full cohort.

Where only some of the cohort have been Classed, a partial list will not be circulated daily as it is incomplete.

Accessing data

There are two queries which Colleges may find useful to extract data from CamSIS.

1. COL_ALL_REC_EXAM_RESULTS. This query will return information by publication date, showing where a student has been Classed (using the standard Classing codes of 1, 21, 22 etc), where the result is provisional (using the Classing code of PRV) or where no result is available (with the Class remaining blank). Only the overall Class (or PRV) will be shown, with one row per student.
   Prompts are: Exam term (ET23 = 3451) and Actual Publication Date which is the publication date of the results (which should match the date of the email from the Exams team).

2. COL_ALL_REC_EXAM_MARKS. This query will return information at paper level, with marks showing per paper as well as the overall result (pass/fail/Class, PRV). There are multiple rows per student and has a prompts as follows:
   - Institution – always UCAMB (not College code)
   - Subject code – exam code, e.g. HST2
   - Term – exam term – ET2023 is 3451

---

1 This is a new code and any local College systems that take data from CamSIS, should be updated to include this as a valid Grading code.
Query tool in CamSIS

If you are unfamiliar with the query tool in CamSIS, you can take the following action:

1. From the Home page, click in the search bar and type ‘Query’. Depending on your access, this may return multiple suggestions – select ‘Query viewer’.

2. This will take you to the Query page. In the search field, type in the query name and click on the yellow search button. This will return all of the queries that match that search input.

3. Now click on ‘run to excel’ – this will open up parameters to input (see point 1 above) and will deposit the output into excel.
